Amar Waqar

Full-Stack, AI & DevOps Engineer

Lahore, Pakistan · amarwaqar15@gmail.com · amarwaqar.vercel.app · linkedin.com/in/amarwaqar · github.com/AmarWaqar-TSKLI

Final-year Software Engineering student at FAST-NUCES (CGPA 3.60, Dean's List 5 of 6) with two industry internships. Ships production systems end-to-end: a container-packaged CMS website builder, a bilingual real-estate app on the App Store and Google Play, and AI-powered developer tools.

EDUCATION

BS Software Engineering, FAST-NUCES (National University of Computer and Emerging Sciences) Expected 2027

CGPA 3.60 · Dean's List 5 of 6 semesters · Gold Medal, first in batch (conferred Dec 2026)

EXPERIENCE

Software Engineering Intern, *Tkxel, Lahore* Jul 2026 – Sep 2026

- Built a CMS-driven website builder (Next.js, TypeScript) where a **single build artifact serves every customer site**: pages live as structured JSON in the database, not compiled HTML, so layout changes ship with zero rebuilds and the whole platform runs from one container image.
- Designed **immutable release-based publishing**, where each publish appends a release compiled to a hosted site, static bundle, or container image, making rollback to any previous release a single pointer update instead of a rebuild.
- Shipped **custom domain connection**: customers point DNS A or nameserver records at the platform and their purchased domain serves their site.
- Completed engineering rotations in **AI** (LangChain, LangGraph agent workflows) and **DevOps**, repairing a deliberately broken three-tier platform from dashboards and logs with Docker, Kubernetes, Terraform, Ansible, and OpenTelemetry.

Full-Stack & AI Developer Intern, *8x* Feb 2026 – Mar 2026

- Built features across the 8x mobile app end-to-end, from React Native screens through to the API layer (React Native, Node.js, Supabase, PostgreSQL).
- Migrated the backend to a scalable service-layer architecture and resolved Supabase identity-resolution issues to enforce **row-level security (RLS)** across the product.

PROJECTS

Zestate (zestate.co · iOS App Store & Google Play) Jun 2026 – Present

- Bilingual (English and Urdu, full RTL) property marketplace shipped as a Next.js web app and a React Native app on **both stores** from one shared design system (Turborepo, Express, PostgreSQL, Supabase).
- Built conversational AI search over natural-language queries, an automated property valuation and investment score, and an agent portal with lead CRM, listing moderation, and credit-based billing.

Zarqais (live: zarqais.vercel.app) May 2025 – Present

- Built UI components and backend APIs for a live full-stack perfume e-commerce store (Next.js, Node.js, Express); improved Lighthouse SEO score by ~35% and page load time by ~25%.

AI-Powered Code Linter (github.com/AmarWaqar-TSKLI/AI_Code_Linter_Repo) Jun 2025 – Jul 2025

- LLM-based linting tool (Python, FastAPI, Hugging Face Transformers) detecting logic bugs beyond static analysis, with context-aware fix suggestions; ~90% detection accuracy on test repositories.

Smart Data Viz May 2025 – Jul 2025

- Web app that cleans uploaded datasets (10k+ rows), generates statistics, and answers natural-language queries with interactive charts (FastAPI, React, Pandas, Plotly).

Softec Management System Nov 2024 – Dec 2024

- Role-based event management platform with dashboards, ticketing, and analytics for 100+ users (React, Java, Spring Boot, MariaDB).

SKILLS

Languages: TypeScript, JavaScript, Python, Java, C++, SQL

Web & Mobile: React, Next.js, React Native, Expo, Node.js, Express, FastAPI, Spring Boot, Tailwind CSS, REST APIs

Databases: PostgreSQL, MongoDB, Microsoft SQL Server, MariaDB, Supabase

AI & Machine Learning: PyTorch, TensorFlow, Hugging Face Transformers, LangChain, LangGraph, RAG, NLP

DevOps & Tools: Docker, Kubernetes, Terraform, Ansible, GitHub Actions, OpenTelemetry, Git, Linux, Postman

CERTIFICATIONS

Meta Web Development Certificate (Meta, 2025) · Machine Learning Specialization (DeepLearning.AI) · Generative AI with LLMs (DeepLearning.AI) · AWS Cloud Technical Essentials (AWS) · Python for Everybody (University of Michigan)
